Report Overview

Increasing demand for medical gloves will be the chief factor driving the isoprene rubber latex market growth during the forecast timeframe. The product is used as a substitute to natural rubber latex in the manufacturing of medical gloves. As the product is manufactured synthetically, it does not contain any impurities or nitrosamines, has low gel content, and exhibits superior properties such as good purity, clarity, flow, softness, strength, and elongation. It is also devoid of any naturally-occurring proteins which eliminates the risk of type 1 allergies among individuals. The product has similar and sometimes even better properties than natural rubber latex. These advantages over conventionally used glove manufacturing products will drive product demand and augment the IRL market in coming years.
