Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Isotactic Poly(1-butene) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Isotactic Poly(1-butene), also known as isotactic polybutene-1 (iPB-1), is a semicrystalline thermoplastic polymer made by the polymerization of 1-butene with all methyl groups aligned on the same side of the polymer chain (isotactic configuration). This structure gives it high crystallinity and contributes to its excellent creep resistance, low-temperature flexibility, and superior stress-crack resistance. Isotactic Poly(1-butene) is primarily used in applications such as hot and cold water piping systems, film packaging, and sealants, where dimensional stability, durability, and chemical resistance are crucial. Its unique ability to slowly crystallize into a more stable form (form I) also distinguishes it from many other polyolefins.

The global Isotactic Poly(1-butene) market size was estimated at USD 663.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
