Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Isotactic Polyacrylonitrile competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Isotactic Polyacrylonitrile is a stereoregular form of polyacrylonitrile in which all the nitrile (-CN) groups are arranged on the same side of the polymer backbone in a highly ordered, repeating configuration. This isotacticity leads to increased crystallinity and improved physical properties such as higher tensile strength, better thermal stability, and enhanced chemical resistance compared to atactic or syndiotactic forms. While standard polyacrylonitrile is widely used as a precursor for carbon fibers, isotactic PAN is primarily of interest in research and specialty applications where highly crystalline and uniform materials are required. It is typically synthesized through stereospecific polymerization using specialized catalysts. The key market driver for isotactic polyacrylonitrile (i-PAN) is its critical role as an advanced precursor for high-performance carbon fibers used in aerospace, defense, automotive, and energy sectors. Its superior crystallinity and molecular alignment result in more efficient carbonization processes, yielding carbon fibers with enhanced tensile strength, modulus, and thermal stability. As demand for lightweight, strong, and heat-resistant materials grows—particularly in electric vehicles, aircraft components, wind turbine blades, and sporting goods—the need for higher-quality carbon fiber precursors like i-PAN intensifies. Additionally, advancements in stereospecific polymerization and catalyst technologies have improved the feasibility of i-PAN production, further supporting its market potential in cutting-edge material science applications.

The global Isotactic Polyacrylonitrile market size was estimated at USD 93.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80%

during the forecast period.
