Report Overview

Isothermal forging press is a type of forging press that utilizes an isothermal process to shape metal into desired forms. In isothermal forging, the temperature of the metal is maintained constant throughout the process, which helps in reducing the strain hardening effect and improving the material flow characteristics. This results in better dimensional accuracy, improved mechanical properties, and reduced energy consumption compared to conventional forging processes. The isothermal forging press is equipped with heating and cooling systems to maintain the desired temperature during the forging operation.
