Abstracts

Isotope labeled excipients are inactive pharmaceutical ingredients, such as fillers, binders, lubricants, or stabilizers, that are engineered to contain stable isotopes?typically deuterium, carbon-13, or nitrogen-15?in place of their naturally abundant counterparts, which enables precise tracking, quantification, and differentiation of these substances from their unlabeled forms in complex biological or chemical matrices. These specialized materials are used primarily in pharmaceutical research and development, particularly in areas such as drug metabolism and pharmacokinetics (DMPK) studies, where they help elucidate the behavior, distribution, and clearance of both active pharmaceutical ingredients and excipients themselves, as well as in analytical method development, quality control, and regulatory submissions to meet stringent safety and efficacy standards.

The global Isotope Labeled Excipient market size was estimated at USD 420.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
