Report Overview

IT Asset Reuse is the repurposing of intellectual property, software, physical devices, business processes, and other similar company assets. From my perspective, this is one of the most powerful ways to maximize productivity. IT Asset Reuse is the waste management strategy in which the whole devices or components get reused rather than recycled or decomposed. The old or obsolete IT devices or components can have a prolonged life and can be reused after the data is deleted from them by using advanced processes. The companies are shifting towards the reuse approach rather than recycling & decompose owing to energy-intensive recycling processes, CO2 emissions, government regulations, and decreasing the prices of material recovered from the recycling.

The global IT Asset Reuse market size was estimated at USD 14350 million in 2023 and is projected to reach USD 25723.60 million by 2032, exhibiting a CAGR of 6.70% during the forecast period.

North America IT Asset Reuse market size was estimated at USD 4181.01 million in 2023, at a CAGR of 5.74% during the forecast period of 2024 through 2032.
