Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on IT Cooling Chiller competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.In 2024, global IT Cooling Chiller production reached approximately 129,545 units, with an average global market price of around US$ 22,000 per unit.The gross profit margin of major companies in the industry is between 30% – 50%.Single factory production capacity is 3,000 – 8,000 units/year.An IT Cooling Chiller is a refrigeration system specifically designed to remove heat from IT equipment, such as servers, data storage, and networking hardware in data centers and server rooms. It works by circulating a chilled liquid (typically water or a glycol mixture) through a closed loop to absorb heat from the IT equipment and then rejecting that heat to the outside environment. These systems are critical for maintaining optimal operating temperatures, ensuring hardware reliability, and supporting high-density computing.The IT Cooling Chiller market is experiencing strong growth, fueled by the global expansion of data centers, the rise of cloud computing, and increasing power densities from AI and HPC workloads. Key trends include a shift towards water-cooled solutions for high-density racks, the integration of chillers with free cooling systems to enhance energy efficiency and reduce PUE, and the adoption of intelligent controls and IoT for predictive maintenance and optimized operation. Sustainability pressures are driving innovation in the use of low-GWP refrigerants and designs that minimize water consumption.

The global IT Cooling Chiller market size was estimated at USD 2850.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3120.80% during the forecast period.
