Report Overview

ITO (Indium Tin Oxide) coated glass plate is a type of transparent conductive material that is commonly used in electronic devices such as touch screens, LCDs, and solar cells. The ITO coating is made up of a thin layer of indium tin oxide, which is deposited onto a glass substrate using a process called sputtering. This process creates a thin, uniform layer of ITO that is highly conductive and transparent, allowing light to pass through while also providing electrical conductivity. ITO coated glass plates are used in a wide range of applications due to their unique properties. They are highly transparent, allowing for excellent visibility and clarity, and are also highly conductive, making them ideal for use in touch screens and other electronic devices. Additionally, ITO coated glass plates are durable and resistant to scratches, making them ideal for use in high-traffic areas.
