The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on IV Bag Filling and Sealing Machines competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. IV bag filling and sealing machine is an equipment that can be used for filling and sealing IV bags. It has a wide range of components such as mass flow meters which help in guaranteeing stable and accurate filling process. Upstream: IV bag filling and sealing machine has different parts that enable it to perform its functions accurately. The main components include Automatic Control System, Driving Mechanism, Signal Response System, Film Feeding Station, Pressure or Pneumatic System, Filling Station, Sealing Station, etc. Many components are made of stainless steel. Downstream: The filled IV bags are used for large-volume parenterals, parenteral nutrition, dialysis and irrigation solutions, providing a flexible, lightweight and break-resistant alternative to glass bottles and vials. In 2024, global sales of IV bag filling and sealing machine reached approximately 281 units, with an average global market price of around US\$ 261 K/unit. As expensive medical manufacturing equipment, the production capacity is limited, with a gross profit margin of 20%-40%. Driving Factors: IV bag filling and sealing machines have many advantages, such as high degree of automation, improved reliability and efficiency, saving labor costs, etc. In recent years, the total demand in the global infusion market has been huge, which has greatly promoted the development of the IV bag filling and sealing machine industry. Manufacturers in the industry continue to invest in R&D and continuously improve product performance, providing a steady stream of power for the sustainable development of the industry itself. Limiting Factors: The market barriers are high and there are few new entrants in the industry, which is not conducive to the development of the industry. There are alternatives to IV bag filling and sealing machines on the market,

especially the infusion production line, which poses a certain threat to the development of the industry. Fluctuations in raw material prices will have some impact on the industry.

The global IV Bag Filling and Sealing Machines market size was estimated at USD 73.43 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
