Abstracts

Jaw crusher wear parts are essential components that are subject to significant abrasion and impact during the operation of a jaw crusher, a machine used for crushing various materials in mining, construction, and other industries. The primary wear parts include jaw plates, toggle plates, and cheek plates. Jaw plates, which are in direct contact with the material being crushed, endure intense pressure and friction, gradually wearing down over time. Their surface often features a serrated or corrugated design to enhance the crushing efficiency. Toggle plates transfer the force from the eccentric shaft to the moving jaw, and they can also experience substantial stress and wear, especially at the pivot points. Cheek plates, located on the sides of the crushing chamber, protect the sidewalls of the crusher from abrasion caused by the moving material. Regular inspection and replacement of these wear parts are crucial to maintain the optimal performance of the jaw crusher, ensure consistent crushing output, and prevent potential damage to other components of the machine.

The global Jaw Crusher Wear Parts market size was estimated at USD 214.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
