### Report Overview:

A Jaw Crusher is one of the main types of primary crushers in an ore processing or a mining plant. A Jaw Crusher lessens large size rocks or ore by having placed the rock into compression. A fixed jaw, mounted in a "V" alignment is the stationary breaking surface, whereas the mobile jaw exerts force on the rock by forcing it against the stationary plate. The space at the bottom of the "V" aligned jaw plates is the crusher product size gap, or the size of the crushed product from the jaw crusher. The rock stays in the jaws till it is small enough for passing through the gap at the jaws' bottom.

The Global Jaw Crushers Market Size was estimated at USD 2076.36 million in 2023 and is projected to reach USD 2582.11 million by 2029, exhibiting a CAGR of 3.70% during the forecast period.
