Abstracts

Jet drive outboard motors are marine propulsion systems that utilize an impeller-based water jet mechanism rather than a traditional propeller, drawing water into an intake and expelling it at high pressure to generate thrust. These units are typically mounted externally on the transom of a boat, similar to conventional outboards, and are valued for their ability to operate safely in shallow waters, around debris, and in areas with submerged obstacles, as they lack exposed rotating blades. They are commonly used on small to medium-sized vessels, including fishing boats, recreational craft, and workboats, particularly in environments where propeller damage or safety concerns are significant.

The global Jet Drive Outboard Motors market size was estimated at USD 190.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.75% during the forecast period.
