Abstracts

Jet Water Meter is a water meter that uses the wall effect principle to calculate the flow rate by measuring the oscillation frequency of the fluid in the jet metering cavity. When the fluid in the closed pipe enters the jet metering cavity, due to the jet wall effect and feedback control, the fluid oscillates in the metering cavity, and the oscillation frequency is proportional to the fluid flow rate, so the flow value is calculated.

The global Jet Water Meter market size was estimated at USD 449.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
