Abstracts

A jettyless LNG transfer system is an innovative and highly specialized solution designed for the transfer of liquefied natural gas (LNG) without the need for a traditional jetty infrastructure. This system offers a more flexible and cost-effective alternative in certain circumstances. It often makes use of floating storage and regasification units (FSRUs) or other floating vessels that are equipped with advanced transfer mechanisms. These can include flexible hoses, articulated arms, or other connection devices that allow for the safe and efficient transfer of LNG between the storage vessel and the receiving ship or facility. The jettyless system is especially beneficial in areas where building a jetty may be technically challenging, environmentally sensitive, or prohibitively expensive. It also enables quicker deployment and can potentially reduce the overall time and cost associated with LNG transfer operations, making it an attractive option for the evolving LNG industry.

The global Jettyless LNG Transfer System market size was estimated at USD 67.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
