## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on K9 Double Convex Lens competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. K9 Double Convex Lenses are double convex lenses with K9 optical glass as the base material. K9 optical glass is an excellent wide-spectrum optical material with high transmittance in the 350nm-2000nm band, high hardness, and the ability to withstand a variety of physical and chemical stimuli. It has low bubble and impurity content, so it is often used as a base material for various optical components. Double convex lenses focus light into a point, have a positive focal length, and are composed of two convex surfaces with equal radius. They are often used in imaging relay systems and imaging of objects at a limited conjugate distance. The characteristic is that the larger the conjugate ratio, the greater the aberration produced.

The global K9 Double Convex Lens market size was estimated at USD 74.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
