Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on K9 Glass Lens competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. K9 optical glass is an excellent wide-spectrum optical material with high transmittance in the 350nm-2000nm band. It has high hardness, can withstand a variety of physical and chemical stimulations, and has low bubble and impurity content, so it is often used as a substrate material for various optical components. The double convex lens focuses light into a point with a positive focal length and consists of two convex surfaces with equal radius. It is often used in imaging relay systems and imaging of objects at a limited conjugate distance. The characteristic is that the larger the conjugate ratio, the greater the aberration produced.

The global K9 Glass Lens market size was estimated at USD 174.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
