Abstracts

Kelp protein is a complete protein, containing all the essential amino acids that the human body cannot synthesize on its own. It also contains a variety of vitamins and minerals, such as vitamin A, vitamin C, vitamin E, iodine, iron, calcium, and magnesium, which are beneficial for maintaining the body's normal physiological functions. It is generally low in fat and cholesterol, making it a healthy protein source for people who need to control their fat and cholesterol intake, such as those with cardiovascular diseases. Kelp is rich in dietary fiber, which can promote intestinal peristalsis, help with digestion and prevent constipation.
