Abstracts

Silicone sealant is a paste made by mixing polydimethylsiloxane as the main raw material, supplemented with crosslinking agents, fillers, plasticizers, coupling agents, and catalysts in a vacuum state. It reacts with water in the air at room temperature and solidifies to form elastic silicone rubber. This adhesive needs to be stored in a sealed state because once it comes into contact with water vapor in the air, it will undergo vulcanization reaction. Silicone sealant is usually used to fill the gaps between structures, playing a role in bonding and sealing. At the same time, they also have excellent effects such as leakage prevention, waterproofing, vibration isolation, and sound insulation. Global silicone sealant is a high-performance sealant widely used in fields such as construction, automotive, electronics, aerospace, etc. According to the latest data, the total import and export volume of silicone sealants worldwide is steadily increasing. Among them, China is one of the world's largest producers and exporters of silicone sealants, with a huge production base and excellent production technology, which not only meets domestic demand but also exports to various parts of the world. In addition, Europe, North America, and the Asia Pacific region are also important import markets for silicone sealants, with demand continuing to grow. With the recovery of the global economy and the development of high-tech industries, the market prospect of silicone sealant is very broad, and it is expected to continue to maintain steady growth in the coming years. Enterprises in various countries should strengthen technological innovation and quality management, enhance product competitiveness, and seize market opportunities.
