The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on KGD Handler competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A KGD (Known Good Die) Handler is a specialized piece of semiconductor equipment used to handle and test individual unpackaged dies?known good dies?before they are integrated into multi-chip modules or advanced packaging solutions. Its primary function is to automate the precise picking, placing, alignment, and electrical testing of bare dies to ensure only fully functional units proceed to the next stage of packaging or assembly. KGD Handlers are designed to operate in cleanroom environments and often integrate with test systems and vision inspection tools to guarantee accuracy, yield, and traceability. These handlers play a crucial role in high-performance applications such as 3D stacking, chiplet architectures, and system-in-package (SiP) designs, where quality and reliability of each die are critical.
