Abstracts

Kids inline skates are a type of roller skate specifically designed for children. These skates feature a set of wheels arranged in a single line, typically two to five wheels per skate, aligned in a row. The design of inline skates provides a more streamlined and maneuverable experience compared to traditional quad roller skates, which have two wheels on the front and two wheels on the back of each skate. The trend toward adjustable sizing in kids' inline skates continues. Many manufacturers offer skates with adjustable frames or boot sizes to accommodate growing feet. This feature ensures that children can use the skates for an extended period, even as their feet grow.

The global Kids Inline Skates market size was estimated at USD 139.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
