Abstracts

A kiln or stove is a stove that is used to fire ceramics and sculptures or to fuse enamel to the surface of metal objects. Generally made of brick and stone, it can be made into various sizes according to needs, and can be operated by combustible gas, oil or electricity. Electric kiln is easier to control temperature than kiln using flammable gas and oil, but some potters and sculptors believe that the temperature of electric kiln rises too fast. The temperature inside the kiln is measured with a pyrometer or a temperature cone, which can be seen through a peephole.
