## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Warming Drawers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. As of 2024, global sales of Warming Drawers reached approximately 4.1 million units, with an average price of about USD 550 per unit. A Warming Drawer is a heated storage appliance, either integrated into a kitchen range or installed as a standalone unit, designed to keep dishes warm or preheat plates. It uses constant-temperature heating elements such as infrared or convection, maintaining temperatures typically between 40-80 °C, often with humidity control to prevent food from drying out or developing a crust. These drawers are ideal for keeping main dishes, breads, or pastries warm, proofing dough at low temperatures, or even slow-cooking. Physically resembling a standard drawer and occupying minimal kitchen space, warming drawers can be seamlessly integrated into cabinetry or paired with ovens.
