## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Knee Protection Treadmill competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Knee Protection Treadmill production reached approximately 4,190.8 K units, with an average global market price of around US\$ 542.5 per unit. A Knee Protection Treadmill is a specialized type of treadmill designed with advanced cushioning, shock absorption, and biomechanical support systems to minimize the impact on a user's knee joints during running or walking exercises. Unlike traditional treadmills, which can transmit significant ground reaction forces to the lower body, knee protection treadmills integrate technologies such as air pressure unloading systems, elastomer or variable-density decks, and suspension-based running surfaces to reduce stress on the knees and surrounding joints. These treadmills are particularly valuable for individuals recovering from injuries, older adults seeking low-impact exercise, athletes undergoing rehabilitation, and general fitness users who want to protect their joints while maintaining cardiovascular training. By combining ergonomic design with protective features, knee protection treadmills provide a safer, more comfortable, and joint-friendly workout environment. The Knee Protection Treadmill supply chain involves upstream suppliers providing raw materials such as steel, plastics, elastomers, electronic components, and shock-absorbing technologies; midstream manufacturers integrating these materials into treadmill frames, cushioning systems, motors, and digital interfaces; and downstream distributors, fitness equipment retailers, rehabilitation centers, gyms, and end-users who adopt the treadmills for joint-friendly exercise and rehabilitation purposes. The single-line production capacity of Knee Protection Treadmill is 185 to 196 K units per year, the average gross profit margin was 33.7%.

The global Knee Protection Treadmill market size was estimated at USD 2274.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
