Abstracts

Fishing nets are nets used for fishing and aquaculture. They are devices made from fibers woven in a grid-like structure. Knotless Nylon Netting is a popular netting option due to its soft, yet high strength qualities. As the emphasis on sustainable development in the fishing industry grows, traditional fishing net designs are undergoing continuous innovation. Knotless nets, emerging as a novel fishing net design, are gaining attention within the fishing community. Traditional fishing nets are often woven from various types of ropes and can easily become entangled in marine life and bottom rocks during fishing, leading to losses and environmental damage. The design of knotless nets addresses this issue by utilizing continuous lines without knots, reducing the risks of entanglement and damage while simultaneously improving the quality of the catch. Another advantage of knotless nets is their reduced impact on marine ecosystems. Traditional fishing nets often result in bycatch of rare species, disrupting the balance of marine ecosystems. The highly selective design of knotless nets allows for more precise targeting of the desired species, reducing harm to non-target species. This aligns with the global trend of sustainable fisheries development and contributes to the protection of marine ecological environments.

The global Knotless Nets for Fishery market size was estimated at USD 593.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
