Abstracts

Konjac jelly is a gelatinous food made from the konjac plant. The edible part of the plant, the corm, is processed into a flour, which is then mixed with water and a gelling agent, typically calcium hydroxide. This mixture sets into a firm, translucent jelly with a unique chewy and slightly bouncy texture. It is low in calories, high in fiber (glucomannan), and often used as a diet food or ingredient in desserts and snacks. Konjac jelly comes in various flavors, shapes, and sizes, and is popular in East and Southeast Asia. The konjac jelly industry is experiencing significant growth, driven by several key trends. Firstly, the rising health consciousness among consumers is a major factor. As people become more aware of the importance of low-calorie, high-fiber diets, konjac jelly's nutritional profile makes it an attractive option. Secondly, the increasing demand for convenient and on-the-go snacks has led to the development of innovative packaging formats, such as squeezable pouches and ready-to-eat cups. These formats cater to busy lifestyles and offer greater portability. Thirdly, the industry is witnessing a diversification of flavors and product applications. Beyond traditional fruit flavors, manufacturers are exploring new and exciting combinations, including tea, coffee, and even savory options. Konjac is also being incorporated into other food products, such as noodles and rice substitutes, further expanding its market reach. Fourthly, the plant-based and vegan trend has contributed to konjac's popularity, as it is a natural and plant-derived ingredient. Finally, online retail and e-commerce platforms have played a crucial role in increasing the accessibility and availability of konjac jelly products globally. These trends suggest a positive outlook for the konjac jelly industry, with continued growth and innovation expected in the coming years.

The global Konjac Jelly market size was estimated at USD 143.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
