Abstracts

Konnex network products are hardware and software devices developed based on the KNX (Konnex) smart building and smart home control bus standard. These include KNX gateways, switch actuators, sensors, system controllers, and visualization platforms, used to achieve unified interconnection and automated control of systems such as lighting, HVAC, security, shading, and energy management within buildings. Their core features are open standards and strong interoperability between devices, making them suitable for intelligent deployment in residential, commercial, and industrial buildings. The downstream users of Konnex network products are primarily smart building integrators, real estate developers, property management companies, energy management service providers, smart home installers, and users in commercial spaces and public buildings (such as hotels, office buildings, schools, and hospitals) to build energy-saving, automated, and visualized control environments. Due to the prevalence of standardized modules, large installation volumes, and high technical barriers, the overall gross profit margin is relatively stable, generally ranging from 25% to 45%, with controllers and gateways achieving higher gross profit margins, reaching around 40%. Konnex network products maintain a core position in the smart building and smart home sectors due to their international standardization, strong compatibility, and wide range of applications, with particularly steady demand growth in energy-saving retrofits of commercial buildings and smart home technology for high-end residences. As the requirements for IoT, unified BMS management, and energy management increase, the integration of KNX with IP technology will further enhance its scalability and system-level value. However, its higher cost, the need for professional installation training, and relatively closed ecosystem mean it faces competitive pressure from wireless protocols such as Zigbee, Wi-Fi, and Matter in the low-to-mid-range market.

The global Konnex Networks Product market size was estimated at USD 8579.0 million

in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.60% during the forecast period.
