### Report Overview

Balloon kyphoplasty is a minimally invasive treatment for spinal compression fractures (also called vertebral compression fractures of VCFs). Kyphoplasty is similar to vertebroplasty; the main difference is that kyphoplasty uses a small balloon that gently lifts bone fragments into their correct position.

Adoption of kyphoplasty is expected to grow throughout the forecast period as hospitals and healthcare providers make a shift towards cost-saving outpatient and minimally invasive surgical procedures. However, the possibility of cement leakage and corresponding damage to the surrounding spinal canal and nerves is a persisting drawback to the procedure.
