Abstracts

L Glutathione Oxidized refers to the disulfide form of glutathione (GSSG), a vital endogenous antioxidant and detoxifying agent naturally occurring in cells, which forms when reduced glutathione (GSH) donates electrons to neutralize reactive oxygen species and other free radicals, thereby becoming oxidized in the process. Unlike its reduced counterpart, L Glutathione Oxidized plays a critical role in maintaining the cellular redox balance by serving as a reservoir that can be enzymatically reduced back to GSH, and it is widely utilized in pharmaceutical formulations, research applications, cosmetic and nutraceutical products for its stability and role in oxidative stress management, signaling pathways, and as a marker in biochemical assays.

The global L Glutathione Oxidized market size was estimated at USD 350.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
