Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on L-Type Pitot Tube competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of L-Type Pitot Tube reached approximately 850,000 units, with an average selling price of approximately \$175 per unit. The single-line production capacity is approximately 80,000 units per year, with an average gross profit margin of approximately 20-30%. L-Type Pitot Tube is an instrument for measuring fluid velocity. It features an L-shaped tubular structure with a total pressure port at the top facing the flow direction and multiple static pressure ports evenly distributed along the sidewalls. It measures the difference between the total pressure and the static pressure (i.e., dynamic pressure) and calculates the fluid velocity based on the Bernoulli equation. The upstream supply chain for L-Type Pitot Tube focuses on the metal raw materials industry (stainless steel, special alloy pipes and bars) and the standard parts industry (flanges, threaded fittings, etc.). The downstream supply chain is highly dependent on the process industry and environmental protection sectors. L-type Pitot tubes are widely used in process gas flow measurement in the power, chemical, and metallurgical industries, as well as in flue gas emission monitoring systems in environmental protection projects.

The global L-Type Pitot Tube market size was estimated at USD 149.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
