Report Overview

Drying ovens can be used in laboratory or industrial settings for a variety of tasks including evaporation, sterilization, temperature testing, and for incubating temperature sensitive experiments. Drying is a delicate process as drying too fast, too slow, or unevenly can ruin an otherwise perfect process. There are many different types of drying ovens for different needs. A basic double wall utility drying oven is not much different from the oven you use in your home kitchen. Gravity convection or forced air convection drying ovens provide a greater degree of evenness, control of temperature, rapid drying capabilities, and many newer models are programmable. Drying ovens with a maximum temperature of 250C, 300C and 350C are available.

The global Lab Heating and Drying Ovens market size was estimated at USD 159 million in 2023 and is projected to reach USD 214.82 million by 2032, exhibiting a CAGR of 3.40% during the forecast period.
