Report Overview

Drying ovens can be used in laboratory or industrial settings for a variety of tasks including evaporation, sterilization, temperature testing, and for incubating temperature sensitive experiments. Drying is a delicate process as drying too fast, too slow, or unevenly can ruin an otherwise perfect process. There are many different types of drying ovens for different needs. A basic double wall utility drying oven is not much different from the oven you use in your home kitchen. Gravity convection or forced air convection drying ovens provide a greater degree of evenness, control of temperature, rapid drying capabilities, and many newer models are programmable. Drying ovens with a maximum temperature of 250C, 300C and 350C are available.
