## Abstracts

Label heat shrinkable film is a specialized packaging material composed of polymer-based films, typically polyolefin, PVC, or PET-G, which contract uniformly when exposed to heat, conforming tightly to the shape of a container while simultaneously displaying printed branding, product information, barcodes, or regulatory labels. It functions as both a protective sleeve and an integrated labeling solution, eliminating the need for separate adhesive labels and offering tamper evidence, durability against moisture and abrasion, and enhanced aesthetic appeal through full-body or spot decoration. Applications span diverse industries, including food and beverages, pharmaceuticals, cosmetics, and consumer goods, where it is used for bottles, cans, jars, and multi-packs to provide product security, brand differentiation, and compliance with labeling standards.
