Report Overview:

Lab balance is a class of balance designed to measure small mass in the sub-milligram range.

A top loading balance (also referred to as top loader balance) is among the most common types of weight measuring scales used in the laboratory. Top loading balances are available in a variety of sizes and weight capacities, from 20 g to 64.1 kg.

The measuring pan of an analytical balance (0.7 mg or better) is inside a transparent enclosure with doors so that dust does not collect and so any air currents in the room do not affect the balance's operation.

The Global Laboratory Balances Market Size was estimated at USD 633.20 million in 2023 and is projected to reach USD 760.49 million by 2029, exhibiting a CAGR of 3.10% during the forecast period.
