Abstracts

To many lab scientists laboratory automation brings to mind large robotic systems, most often requiring bespoke or containment facilities and highly trained personnel. Vendors specializing in delivering such complex automated solutions have predominantly served the needs of core automation groups in pharma and biotech associated with high throughput screening (HTS), profiling, compound management, large-scale cell culture and maintenance, and more recently biospecimen storage. However, for each of these core labs there are 1,000s of others interested in more efficient ways to carry out routine, repetitive or demanding tasks. This is where the application of small-scale benchtop automation can offer numerous compelling advantages and make a big difference. Benchtop automation consists in the use of machines of reduced size compared to large automation units found in the most resource-rich laboratories. Benchtop automation are often flexible, meaning that they can deal with many different tasks. Since many laboratories do not need to employ full-scale automation, benchtop automation can be an attractive solution for them. Also, the low-cost devices presented in the previous subsection could easily be employed as benchtop solutions in many cases.

The global Laboratory Benchtop Automation market size was estimated at USD 1374.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Laboratory Benchtop Automation market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
