Abstracts

A Laboratory Cryogenic Grinder is a specialized machine used for grinding materials at extremely low temperatures, typically below -150°C . This type of grinder is essential for processing heat-sensitive or brittle materials, such as plastics, pharmaceuticals, food, and chemicals, that may become tough or lose their properties when exposed to higher temperatures. By using liquid nitrogen or other cryogenic gases to freeze the materials, the grinder enhances the material's brittleness, making it easier to break into smaller particles. This method allows for more efficient and precise grinding, ensuring the preservation of the material's original properties.

The global Laboratory Cryogenic Grinders market size was estimated at USD 85.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
