Report Overview

Laboratory-developed testing (LDT) refers to diagnostic tests designed, validated, and performed within a single clinical laboratory, typically outside the oversight of regulatory bodies like the FDA. These tests are often developed to meet unmet clinical needs, particularly in specialized areas such as oncology, genetics, and infectious diseases, where standardized commercial tests may not be available. LDTs leverage advanced technologies, including next-generation sequencing (NGS) and polymerase chain reaction (PCR), to provide highly customized and precise diagnostic solutions. While they offer flexibility and rapid innovation, concerns about standardization, accuracy, and regulatory gaps have prompted ongoing debates about stricter oversight to ensure patient safety and test reliability. The market for LDTs is driven by increasing demand for personalized medicine, advancements in molecular diagnostics, and the growing prevalence of complex diseases requiring tailored diagnostic approaches.

The global Laboratory developed Testing market size was estimated at USD 3943.92 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.84% during the forecast period.
