Report Overview

Magnetic stirring bar is a laboratory instrument for liquid mixing, mainly used for stirring or simultaneously heating and stirring low viscosity liquid or solid-liquid mixture. Its basic principle is to use the principle of repulsion of the same sex and attraction of the opposite sex of the magnetic field, and use the magnetic field to push the magnetic stirrer placed in the container to perform circular rotation, so as to achieve the purpose of stirring the liquid. With the heating temperature control system, it can heat and control the sample temperature according to the specific experimental requirements, maintain the temperature conditions required by the experimental conditions, and ensure that the liquid mixing meets the experimental requirements.
