Report Overview

Laboratory Pass-through oven is primarily used in applications which require rapid drying and sterilization. Laboratory Pass-through oven is also used to measure the loss on drying. Standard applications of most laboratory ovens involve heating and drying glassware or autoclaving lab supplies for sterilization purposes. Laboratory Pass-through ovens are also commonly used for performing material testing to determine tensile strength, deformation, and resiliency of many manufactured products. Ovens are also for sample drying, baking, annealing, conditioning, sterilizing, evaporating and dehydrating. Heat is transferred from the bottom up through the oven chamber by natural convection and exits through vents in the oven top.
