Report Overview

Laboratory rounding machine are utilized to convert cylindrical extruded granules into smooth, uniform spheres. The impact of particles with walls, friction plates and other particles leads to plastic deformation of particles, changing the sphere. The final shape of the granules depends on time and formulation, once the desired granule shape is achieved, the machine will collect and dry the granules. Compared with the rounding machine for production, the laboratory rounding machine has the characteristics of small size and light weight, which is convenient for the trainers to operate.
