Abstracts

Lacosamide oral solution is a clear, colorless, liquid formulation of the antiepileptic drug lacosamide, specifically designed for oral administration to treat partial-onset seizures in patients with epilepsy. It is a voltage-gated sodium channel inhibitor that selectively enhances slow inactivation of sodium channels, thereby stabilizing hyperexcitable neuronal membranes and reducing seizure frequency. The oral solution formulation offers a critical alternative for patients who have difficulty swallowing tablets, such as pediatric populations, elderly individuals, or those with dysphagia, ensuring accurate dosing through graduated oral syringes or dispensers. It is typically available in a concentration of 10 mg/mL and is often used as adjunctive therapy or, in some cases, as monotherapy, with its bioavailability equivalent to that of tablet forms, providing flexibility in treatment regimens while maintaining therapeutic efficacy.

The global Lacosamide Oral Solution market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
