Abstracts

Lake and pond management services offer professional water body maintenance and consulting services, utilizing technologies such as aeration, plant control, water quality testing, and fisheries management to maintain healthy, clear, and sustainable water bodies. The goal is to create a balanced aquatic ecosystem that meets the specific needs of owners in terms of aesthetics, recreation, or habitat. The lake and pond management service industry chain is an ecosystem integrating technology, services, and product supply. The upstream market mainly consists of equipment and material suppliers and technology research and development institutions. The value stream of the industry chain is that service providers combine upstream products and expertise to solve water problems for downstream customers and maintain ecological balance. Climate change-induced water quality deterioration, such as extreme weather events and rising temperatures, has accelerated cyanobacterial blooms and excessive aquatic plant growth, urgently requiring professional management. Simultaneously, increased public and regulatory awareness of environmental health, coupled with new environmental regulations compelling downstream customers to invest in water health management, is driving the industry's development. The industry also faces some obstacles in its progress. On the one hand, some governance technologies have limitations in application. For example, how to formulate and implement truly efficient and personalized governance solutions tailored to the pollution characteristics and ecological environment of different lakes remains a topic that the industry needs to continue exploring. On the other hand, lake governance often involves multiple administrative regions, and the mechanisms for cross-regional collaborative governance are not yet perfect, which poses challenges to unified planning, supervision, and ecological compensation.

The global Lake and Pond Management Service market size was estimated at USD

885.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
