Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Lambda Cyhalothrin Acid competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Lambda cyhalothrin acid is a widely used organic fluorine insecticide, belonging to the benzoylurea class of insecticides. It is mainly used in agriculture to control various pests, especially some difficult to control pests, with a long residual period and good environmental safety. In 2024, global Lambda Cyhalothrin Acid production reached approximately 485821 tons, with an average global market price of around US\$ 2638 per ton. Pyrethroid is a broad-spectrum insecticide that can control various pests. Its insecticidal toxicity is 10-100 times higher than older generation insecticides such as organochlorine, organophosphorus, and carbamate. Pyrethroids have a strong contact killing effect on insects, and some varieties also have stomach toxicity or fumigation effects, but none of them have a systemic effect. Its mechanism of action is to disrupt the normal physiology of insect nerves, causing them to go from excitement, spasm to paralysis and eventually death. Pyrethroids are safe for humans and animals due to their small dosage and low concentration, and have minimal environmental pollution. They are biomimetic products of natural pyrethroids. With the warming of the climate and the advancement of urbanization, the task of urban pest control and vector control has become increasingly challenging. The control and prevention of vector organisms play an important role in the control of infectious diseases such as Zika virus disease, dengue fever, yellow fever, and malaria, while chemical insecticides can effectively suppress the spread of mosquito borne epidemics. Pyrethroids are recommended by the World Health Organization for their high insecticidal efficiency and low toxicity to humans and animals, and are therefore included in the list of important health insecticides and their applications for preventing

vector borne organisms. It can be said that as the main product of hygiene pesticides, pyrethroids play an important role in the daily chemical and household insecticide markets, and have a huge market.

The global Lambda Cyhalothrin Acid market size was estimated at USD 128.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
