Abstracts

Laminated can steel is a new type of composite material primarily used in the manufacturing of metal cans. It takes cold-rolled thin steel plates, tinplates, chrome plates, etc. as the substrate, and coats one or more layers of plastic film on its surface through specific processes. This material combines the strength of metal with the excellent properties of plastic films, such as good corrosion resistance, water resistance, and barrier properties. It can effectively prevent the contents from reacting with the metal. Meanwhile, it has an attractive appearance and printability, meeting the requirements of various packaging for fine printing. In addition, it is environmentally friendly and recyclable, being widely used in the can-making fields of food cans, beverage cans, chemical cans, etc.

The global Laminated Can Steel market size was estimated at USD 1240.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
