Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Laminated Polystyrene Paper (PSP) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Laminated PSP refers to polystyrene paper that has been coated or laminated with a protective film—typically PET, PE, or aluminum—to enhance barrier properties, stiffness, and surface durability. This version is widely used in food packaging, medical trays, and cosmetic cartons where moisture, grease, or light protection is required. The laminated surface improves print adhesion and provides a glossy or matte finish, making it suitable for high-end packaging designs. It retains the core benefits of PSP, including light weight and structural rigidity.

The global Laminated Polystyrene Paper (PSP) market size was estimated at USD 57.1 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Laminated Polystyrene Paper (PSP) market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
