## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Land-based Atlantic Salmon competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Land-based Atlantic Salmon production reached approximately 70 K tons, with an average global market price of around US\$ 40 per kg. Land-based Atlantic salmon are a type of farmed salmon raised in a closed-containment aquaculture system on land, as opposed to traditional sea pens in the ocean. This method uses tanks and often recirculating aquaculture systems (RAS) to provide a highly controlled environment, allowing for the precise management of water quality, temperature, and fish health. This approach aims to reduce the environmental impacts associated with traditional salmon farming, such as the risk of escaped fish, sea lice infestations, and waste discharge into coastal waters.

The global Land-based Atlantic Salmon market size was estimated at USD 2800.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.10% during the forecast period.
