Report Overview

Land-based salmon farming, also known as recirculating aquaculture systems (RAS), involves raising salmon in controlled, onshore facilities rather than traditional open-net ocean pens. This method uses advanced water filtration and monitoring technologies to maintain optimal conditions, reducing environmental risks such as sea lice infestations, pollution, and escapes while allowing for year-round production closer to consumer markets. The market for land-based salmon has grown rapidly due to increasing demand for sustainable seafood, regulatory pressures on conventional aquaculture, and technological advancements improving cost efficiency. Key players include Atlantic Sapphire, Nordic Aquafarms, and AquaBounty, with significant investments in large-scale RAS facilities in North America and Europe. Challenges remain, such as high capital and operational costs, energy consumption, and scaling production to meet global demand, but the sector is poised for expansion as consumers prioritize traceability and eco-friendly protein sources.
