Abstracts

Landing gear is the undercarriage of an aircraft or spacecraft, and is used in both takeoff and landing. For aircraft, the landing gear supports the craft when it is not flying, allowing it to take off, land, and taxi without damage. Wheels are typically used but skids, skis, floats or a combination of these and other elements can be deployed depending both on the surface and on whether the craft only operates vertically (VTOL) or is able to taxi along the surface. Faster aircraft usually have retractable undercarriages, which folds away during flight to reduce air resistance or drag. Global Landing Gear key players include UTC Aerospace Systems, H?roux-Devtek Inc, Safran Landing Systems, etc. Global top three manufacturers hold a share over 50%. Europe is the largest market, with a share about 55%, followed by USA and China, both have a share about 35 percent. In terms of product, Strut Landing Gear is the largest segment, with a share about 45%. And in terms of application, the largest application is Land Route, followed by Amphibious.
