Report Overview:

Landing gear is the undercarriage of an aircraft or spacecraft, and is used in both takeoff and landing. For aircraft, the landing gear supports the craft when it is not flying, allowing it to take off, land, and taxi without damage. Wheels are typically used but skids, skis, floats or a combination of these and other elements can be deployed depending both on the surface and on whether the craft only operates vertically (VTOL) or is able to taxi along the surface. Faster aircraft usually have retractable undercarriages, which folds away during flight to reduce air resistance or drag.

The Global Landing Gears Market Size was estimated at USD 4728.30 million in 2023 and is projected to reach USD 5678.80 million by 2029, exhibiting a CAGR of 3.10% during the forecast period.
