Abstracts

The lane keeping system (Lane Keeping System, LKS) controller is a core component of an advanced automobile driving assistance system. Its main function is to help the driver keep the vehicle in the center of the road during driving to improve driving safety and comfort. The lane keeping system controller integrates multiple sensors (such as cameras, radars, lidars, etc.) and complex algorithms to monitor the vehicle's driving status and surrounding environment in real time, and automatically adjust the vehicle's driving direction to prevent the vehicle from deviating from the lane or entering the opposite lane. The controller is the 'brain' of the lane keeping system, responsible for data processing, decision making and execution of control instructions to ensure that the vehicle remains stable in the correct lane.
