## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Langevin Type Transducer competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Langevin transducer is an ultrasonic energy conversion device based on the piezoelectric effect. It couples the piezoelectric ceramic stack (such as PZT-8) with the metal front and rear vibrators through prestressed bolts, converts electrical energy into high-frequency mechanical vibration at the resonant frequency (such as 20kHz), and achieves high-efficiency acoustic energy output (electrical-acoustic conversion efficiency > 90%). Its core advantage is that it uses the metal cover and bolt pre-tightening force to protect the piezoelectric ceramic from the risk of cracking, while taking into account high amplitude stability (? 2?m) and long life (> 10<sup>8</sup> cycles). It is widely used in ultrasonic welding, industrial cleaning, medical equipment and precision manufacturing fields; the average unit price in the market in 2024 will vary greatly due to the difference in power and precision. The batch price of low-end general-purpose models will be about US\$2-10 per unit, and the unit price of mid-to-high-end industrial-grade products will reach RMB 600-4000; in terms of sales, although there is no accurate statistics on the global total, the demand in the industrial and consumer fields continues to grow - only Chinese-made ultrasonic cleaning equipment requires more than one million transducers per year, coupled with the expansion of scenarios such as automotive electronic welding and medical atomizers, it is estimated that the global shipment of Langevin transducers will reach 50 million in 2024.

The global Langevin Type Transducer market size was estimated at USD 1500.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
